

FOR IMMEDIATE RELEASE

CATI to Exhibit at I/ITSEC-2025 – BOOTH 1267

Ozark, AL., November 25, 2025 - CATI Training Systems, (CATI), a leader in innovative Image Generator and Simulation Solutions, is pleased to announce we will be exhibiting at the 2025 Interservice/Industry Training, Simulation and Education Conference (I/ITSEC), located at the Orange County Convention Center, Orlando, FL between 1-4 December 2025. I/ITSEC is the world's largest

modeling, simulation, and training event of the year, held annually at the Orange County Convention Center, Orlando, Florida. Featured in our booth this year will be our new CATI X-IG FUSION® virtual reality HMD demonstration. CATI's X-IG Fusion® represents the seamless integration of a commercially available 3D game engine with CATI's trusted X-IG® Image Generator. CATI will also have a single-seat CAPTE-VCS+ UH-60M FTD supported by both a small screen 4K dome and CATI X-TENDED Reality™ mixed reality visuals. Additionally, CATI will showcase our latest solutions for training, simulation, synthetic environments, and virtual reality featuring X-IG® Version 5.0. Please come see us at **Booth #1267**. Walk-ins welcome or to schedule an appointment for a demonstration and discussions, please contact Vincent Hill, Vice President of Business Development.

About CATI Training Systems

CATI is headquartered in Ozark, AL, and was initially incorporated in 1992 as Carmel Applied Technologies, Inc. CATI entered the competitive visual system providers market in 1997 with an OpenGL® Silicon Graphics (SGI) based image generator, X-IG®. CATI Training Systems continues to provide engineering services and products for government, commercial, and civilian organizations around the world.

Today, CATI's image generator solutions and UAS Training devices are all PC-based. CATI's image generators are specifically designed around industry-standard OpenGL®, a high-performance graphics Application Programming Interface (API), and OpenFlight®, the 3D standard format for the visual simulation industry. The open design of X-IG®, X-TENDED Reality™, and X-IG® FUSION run on 100% Commercial-Off-the-Shelf (COTS) PC-based hardware and software. This allows us to offer high-performance, versatile capabilities for various types of training, testing, and experimentation. X-IG® and its suite of associated tools and programs offer superior image fidelity, realism, and ease of integration with most simulation systems.

Every system CATI delivers provides unmatched ease of use, open architecture, COTS tools, and flexible interface options as well as low acquisition, overhead, and life cycle support costs.
